

You've probably already got software.

But it's software you've had to fit yourself around.

Most businesses are running on tools that were built for everyone — which means they're a perfect fit for no one. You work around the gaps, you live with the compromises, and you still end up doing half the job manually. AXRIK builds custom web apps and websites designed around how your business actually works, with AI built in from the start to save you real time, every day.

What makes us different

Not a template you have to fit into.

Off-the-shelf software makes you adapt to it. We do the opposite — we learn how your business runs and build something that fits it exactly. Your products, your customers, your workflow. No workarounds, no features you'll never use, no monthly bill for a system that's 70% right.

The AXRIK difference

Custom business tools with AI built in.

We don't bolt AI on as an afterthought. We build it into your system from day one — so it's doing useful things like drafting your communications, flagging what needs attention, and learning your patterns over time. Real AI, for real tasks, in a system built around you.

What this looks like in practice

Customer ordering

A website built around your products, your delivery days, your rules — not a

generic shop template.

Business management

Orders, customers, bookings, finances — all in one app, built around the way you actually run things.

Team & operations

Staff management, route planning, job scheduling — tools that match your operation, not the other way round.

AI that does something useful

Most businesses know AI exists. Very few know how to use it in a way that saves real time. We design it into your system from the start — not as a feature to impress, but as a tool that earns its place every day.

- **Auto-draft customer messages**
- **Generate picking lists & run sheets**
- **Forecast demand & stock**
- **Flag overdue invoices & chase**
- **Draft social media posts from live data**
- **Summarise customer history instantly**

How it works

1

We learn your business

A proper conversation about how you work today — what fits, what doesn't, and where you want to go.

2

We show you the build

A working prototype — not a mockup — so you can see exactly how it will look and feel before anything is committed.

We build and stay with you

Built in stages, supported ongoing. As your business grows, your system grows with it.
